DETAILED ACTION

Specification

The specification has been checked to the extent necessary to determine the presence of all possible minor errors. However, the applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections

Claim Rejections - 35 USC § 112

Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Correction or clarification is required.

In claim 1, the description of the present invention is incomplete because the claimed filter does not have an input/output. Thus, the claimed filter may not perform the recited function. Also, it is unclear how the transistors can operate as a large resistance resistor since this limitation is not clearly defined.

In claim 4, the recitation "can" on line 4 is indefinite because it does not positively recite the claimed invention.

The remaining claims are dependent from the above claims and therefore also considered indefinite.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 2816

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 USC 102 (b) as being anticipated by Song et al (US 6,091,289).

Song et al discloses in Figures 1 and 5 a filter circuit comprising:

- a capacitor (C21);
- a first N-type transistor (Q21) having a first terminal connected to a first voltage source (Vdd) and a second terminal connected to the capacitor (C21);
- a second P-type transistor (Q22) having a first terminal connected to the second terminal of the first transistor and a second terminal connected to ground;
- a second voltage source (100B); and
- wherein the first transistor and the second transistor are for operating as a large-resistance resistor.

Allowable Subject Matter

Claims 4-6 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

The claims are allowable because the prior art of record does not show the connections of the third and fourth transistors as claimed.
